Balance of payments for QI and QII, 2014, according to BPM6

General specifications

Starting from Quarter I, 2014, the international methodological standard on balance of payments compiling was accepted, based on the recommendations of the IMF's Balance of Payments and International Investment Position Manual, 6th edition (BPM6). The need for updating the methodological framework of external sector statistics has been driven by the world economic and financial developments, by the experience accumulated by statisticians, and by users' requirements. At the same time, methodological guidelines specified in BPM6 are meant to ensure the reconciliation between balance of payments and other macroeconomic statistics: statistics of national accounts (SNA), monetary and financial statistics, government finance statistics.

The National Bank of Moldova has launched the BOP compiling project according to the new BPM6 methodological requirements for 2014 starting from data for Quarter I, reported to the IMF in August 2014. The following updates will be disseminated according to deadlines set in the Special Data Dissemination Standard (SDDS).

Thus, two versions of balance of payments have been compiled for Quarter I and II, 2014:

- According to BPM5 requirements for domestic users, published on the bank's website with comments;
- According to the new BPM6 requirements for official reporting to the IMF and for dissemination in the country in addition to the version compiled according to BPM5, published on the NBM's website Annexes 1 and 2, and Annexes 3.1–3.14, which include comparative tables of BOP accounts compiled according to BPM5 and BPM6.

To that end, the existent primary data sources have been analyzed, processing methods have been adjusted according to the new requirements, new data sources have been used in order to cover the needs of producing balance of payments indices, formerly elaborated calculation methods have been adjusted for some items.

The transition to new methodological standards in balance of payments statistics involves important changes that can have a significant impact on data interpretation by users. These changes recorded in the balance of payments can be grouped in two categories:

- 1. Conceptual changes regarding:
 - Usage of new principles in item elaborating:
 - 1. Direct investment is recorded on an asset-liability basis, as against the directional principle used in BPM5, while standard components are classified in terms of the relationship between the participants in a direct investment group (direct investor, direct investment enterprise, their branches and other affiliated entities);
 - 2. Financial instruments flows are recorded aggregated on a net basis;
 - 3. Payments on loans are recorded based on cash-basis (in BPM5 payments were recorded on due-for-payment basis);
 - 4. Arrears on loan service are not recorded separately, they are included under loans;
 - Introduction of new items;
 - New requirements regarding the structure of articles, both in terms of additional specification and combination;
 - Recording of some balance of payments components as memo items;
 - Introduction of a new classification for institutional sectors, reconciled with the SNA and other macroeconomic statistics:
 - 1. Central bank;
 - 2. General government;
 - 3. Deposit-taking corporations, except the central bank;
 - 4. Other sectors:

October 2, 2014 Page 2 of 11

- 1. Other financial corporations;
- 2. Non-financial corporations;
- 3. Households;
- 4. Non-profit institutions serving households (NPISH).
- 2. Changes to the presentation form, item names, aggregates' calculation methods, signs of indices *(table 1)*.

	1		

Changes to each item are described separately below.

October 2, 2014 Page 3 of 11

Current account – goods:

- 1. The value of goods that cross the border but don't change ownership (*such as goods for processing*), as well as the value of repairs on goods, are deducted from the international trade in goods statistics;
- 2. The value of goods that change ownership but don't cross the border (*net exports of goods under merchanting*) is added;
- 3. **Re-exports** are recorded separately (as a memo item) and include goods produced in other economies and previously imported that are then exported without any essential transformation, which account for a considerable share of our country's exports.

Current account – services:

- 1. Manufacturing services on physical inputs owned by others and Maintenance and repair services are added;
- 2. **Financial intermediation services indirectly measured (FISIM)** are introduced, comprising the part of interest that represents the implicit cost of financial intermediation (in BPM5 FISIM weren't identified separately from interest and were included in income);
- 3. **Postal and courier services** are shown separately;
- 4. Personal and business travel is further refined to show accommodation, food-serving, and other services;
- 5. Expenditures on domestic building supplies by nonresident construction companies are included in *Construction services (in BPM5 other business services)*;

Current account – primary income (in BPM5 - income):

- 1. Investment income is classified by functional categories, thus, *income on reserve assets* is identified separately (in BPM5 it was registered under other investment income or under portfolio investment income, depending on the instruments in reserves structure);
- 2. Direct investment income is broken down by type of investment relationship;
- 3. Income on other equity, other than direct and portfolio equity, is recorded under other investment income;
- 4. Interest income is adjusted to reflect *pure interest* only, considering that the FISIM component is included under *financial services*.

Current account – secondary income (in BPM5 – current transfers):

- 1. Taxes on production and on imports are included under primary income;
- 2. Technical assistance related to capital investment projects (not defined explicitly in BPM5) is excluded and recorded as capital transfer in the capital account;
- 3. The concept of *personal transfers* is introduced, which is broader than *workers' remittances* because it includes all transfers between natural persons, not just those of economic migrants working abroad and considered to be residents of another economy.

Capital account:

- 1. High-value inheritance is treated as capital transfers rather than as current transfers;
- 2. A conventional rule is introduced to distinguish between debt forgiveness and debt cancellation;
- 3. Personal effects, financial assets and liabilities of individuals changing residence are no longer recorded as capital transfers (migrants' transfers have been excluded from the balance of payments).

Financial account – direct investment:

- 1. Direct investment is shown on an asset-liability basis, as distinct from the directional principle used in BPM5;
- 2. Under standard components, direct investment is classified in terms of the relationship between the investor and the investment enterprise. Thus, under the item "Direct investor in direct investment enterprises" the reporting economy of the direct investor records the direct investor's assets, while the reporting economy of the direct investment enterprise records the (mirror) liabilities of the direct investment enterprise.

October 2, 2014 Page 4 of 11

- 3. Under the item "Direct investment enterprises in direct investor (reverse investment)" the reporting economy of the direct investment enterprise records the assets of the direct investment enterprise, while the reporting economy of the direct investor records the direct investor's liabilities.
- 4. The item *other capital (loans between affiliated companies in BPM5*) is expanded and renamed as debt instruments in BPM6;
- 5. Drawings and repayments on loans from foreign direct investors that are financial corporations other than deposit-taking institutions are no longer recorded under direct investment as in BPM5, but under other investment;
- 6. Debt between certain types of affiliated financial corporations is included in direct investment.

Financial account – portfolio investment and financial derivatives:

- 1. Reinvested earnings of investment funds are recorded as balance of payments transactions (BPM5 implied the inclusion of these reinvested earnings in the international investment position only, as valuation changes);
- 2. Financial instruments are shown by maturity (short-term and long-term), according to the original maturity.

Financial account – other investment:

- 1. Instruments are shown by maturity (short-term and long-term);
- 2. Adjustments for trade credits are not applied to goods for processing, which, according to the BPM6, are excluded from goods;
- 3. Repayments of loans are recorded on cash basis, so that the arrears on interest are included in the *loans* item and not in *other liabilities* as in BPM5.

Balance of payments analysis

The **current account** (table 2) compiled according to BPM6 reached a deficit of US\$ 72.82 million in Quarter II and US\$ 125.22 million in Quarter I, 2014 (as against US\$ 18.68 million and US\$ 126.01 million respectively for Quarter II and I, 2014 according to BPM5). All current account items (goods, services, primary income, secondary income) have been affected by changes operated according to the new methodology.

As compared to Quarter I, 2014, current account deficit in Quarter II decreased by 41.8% as a result of increasing surpluses recorded in primary income (by 35.8%) and in secondary income (by 30.2%). The surplus recorded in services (US\$ 26.62 million) also contributed to the decrease in current account deficit.

The **trade in goods balance** (table 3) recorded a deficit of US\$ 743.45 million (US\$ 710.78 according to BPM5), growing 15.0% as against Quarter I, 2014.

The components of the *Goods* item calculated according to BPM6 have changed both as against BPM5 and *international trade* statistics produced and disseminated by the NBS, as a result of changes in:

Exports: (i) the value of *goods for processing* is excluded from the exports of goods; (ii) the value of net exports of *goods under merchanting* is added; (iii) *re-exports* are shown as a memo item; (iv) *repairs on goods* are excluded.

Imports: (i) the value of *goods for processing* is excluded from the imports of goods; (ii) *repairs on goods* are excluded.

Credit	2.75	4.50	Credit	15.62	66.57
Debit	-14.03	-18.92	Debit	14.03	18.92
			NET LENDING (+) / NET BORROWING (-) (current and capital account balance)	-123.63	-25.17

Exports amounted to US\$ 453.03 million (US\$ 604.00 million according to BPM5). Re-exports, which account for an essential share in exports (23% in general merchandise), increased its share only by 0.1 percentage points as compared to Quarter I, 2014.

Imports (FOB) amounted to US\$ 1,196.48 million (US\$ 1,314.78 million in BPM5).

The item "Repairs on goods", excluded from **goods**, is reflected in **services** under the name *Maintenance and repair services*, with the addition of transport equipment maintenance, which was reflected in *other transport services* according to BPM5.

Services (table 4 and Annexes 3.3-3.4) recorded a surplus of US\$ 26.62 million, changing considerably as compared to those compiled according to BPM5 (US\$ 13.82 million deficit), particularly as a result of the 18.1% increase in exports. This is due to the introduction of a new item in *services* according to BPM6: *Manufacturing services on physical inputs owned by others*, for the calculation of which additional information from the customs declarations database has been processed. This item has had a significant impact on the services balance, recording a surplus of US\$ 43.09 million (in Quarter I, 2014 it was US\$ 40.53 million). In total exports of services, *manufacturing services on physical inputs owned by others* have a 15.1% share (in Quarter I, 2014 – 15.9%).

Financial services comprise a new item: Financial intermediation services indirectly measured (FISIM), consisting of the part of interest that represents the implicit cost of financial intermediation. In BPM5, the value of FISIM wasn't calculated separately from interest – it was included in income, whereas in BPM6 it is calculated for loans offered and deposits accepted by financial institutions. Thus, the value of interest is divided into pure interest (included in primary income) and FISIM (included in services). These indirectly measured services only concern authorized banks (exports) or foreign banks (imports) and are calculated by means of an algorithm which measures the difference between the actual interest and the pure interest – estimated based on a reference interest rate.

In the *Services* item, a range of changes has also been made concerning the reclassification of some components and the presentation of some items with additional details.

Primary income (BPM5 – **income**) (table 2 and Annexes 3.5-3.6) recorded a balance of US\$ 223.31 million, which doesn't differ significantly from the surplus calculated according to BPM5 (US\$ 223.63 million). Note the separate presentation of *income on reserve assets*, which amounted to US\$ 6.71 million (in Quarter I, 2014 – US\$ 6.98 million). According to BPM5, they were registered under *monetary authorities other investment income* and in *portfolio investment income* (depending on the instruments in reserves structure).

Other investment income has been recorded after FISIM: in Quarter II, 2014 – US\$ 14.87 million, in Quarter I, 2014 – US\$ 14.27 million. As a memo item, the total amount before FISIM is also shown. Under *primary income* interest is shown before and after FISIM, and the value of FISIM is recorded under *services*. The item "Other primary income" also includes taxes on production and on imports, reclassified from the *current income* account of BPM5.

Secondary income (BPM5 – current transfers) (table 2 and Annexes 3.7-3.8) recorded a surplus of US\$ 420.70 million in Quarter II, as against US\$ 323.09 million in Quarter I (US\$ 482.29 million and US\$ 335.41 million, respectively for Q II and Q I – according to BPM5). The major change concerns the transfer of a sizeable amount (US\$ 12.87 million in Quarter I, 2014 and US\$ 62.07 million in Quarter II,

October 2, 2014 Page 8 of 11

2014) from *secondary income* to the *capital account* (*investment projects*) and the redistribution of some amounts between institutional sectors (from *other sectors* to *general government*).

The **capital account** (table 2 and Annexes 3.9-3.10) recorded a surplus of US\$ 47.65 million (in Quarter I, 2014 the surplus was US\$ 1.59 million), as distinct from the deficit recorded according to BPM5 (US\$ 11.28 million in Quarter I and 14.42 million in Quarter II). These changes are mainly due to the exclusion of *migrants' transfers* from the *capital account* and to the transfer of the technical assistance related to investment projects from the *secondary income* account.

According to the new methodology a new index – "Net lending (+) / Net borrowing (-) (current and capital account balance)" – is calculated as the sum of current account and capital account balances, which should be equal to the financial account balance. This equality is hard to achieve in practice, therefore an item called net errors and omissions has been introduced and is calculated as the difference between "Net lending (+) / Net borrowing (-) (financial account balance)" and "Net lending (+) / Net borrowing (-) (current and capital account balance)" (table 5).

The **Net lending (+)** / **Net borrowing (-)** (*financial account balance*) recorded a value of US\$ 77.36 million (US\$ 77.36 million in *BPM5*), which represents, according to BPM6 a net borrowing equal to the difference between the change in assets and the change in liabilities.

All items of the **financial account**, according to BPM6 (table 5 and Annexes 3.11-3.12) are shown on a net basis as the difference between the *net acquisition of financial assets* and the *net incurrence of liabilities*. The breakdown by institutional sectors and by maturity (except for the item *direct investment*) has also been introduced. The names of some items have been changed, certain components have been regrouped (reclassified), the very nature of some indices has been modified, and additional details have been introduced.

Portfolio investment and financial derivatives have not been subjected to change compared to the BPM5 version. Only additional presentation by sector and by maturity has been introduced.

Direct investment is shown on an asset-liability basis, as distinct from the directional principle used in BPM5, and under standard components, direct investment is classified in terms of the relationship between the investor and the investment enterprise. Major methodological changes also involve the structure of the item *direct investment*, so that according to BPM6 the change in historical debt for formerly imported energy resources are recorded under *direct investment* (the respective enterprise being foreign-owned) and not under *other liabilities*.

Thus, in Quarter I, 2014 the *direct investment* balance was negative, amounting to US\$ 123.23 million, as a result of the registered transactions: liabilities increased by US\$ 122.67 million and the assets decreased by US\$ 0.56 million. In Quarter II, 2014 the net *direct investment* amounted to US\$ 1.74 million, which shows an increase in assets by US\$ 4.80 million and a growth in liabilities by US\$ 3.06 million.

Major methodological changes involve the structure of the item *direct investment – net incurrence* of liabilities – debt instruments - direct investor in direct investment enterprises (BPM5 – direct investment in reporting economy – other capital – other sectors – liabilities to foreign investors), where two additional components have been recorded: change in debt for natural gas and interest arrears on loans from the direct investor.

Decrease in other debt for other energy resources (electricity) was reflected under the item other accounts receivable/payable – other - nonfinancial corporations, households and NPISHs (BPM6).

All drawings and repayments on loans in inter-company lending by *other financial corporations* have been shown under *other investment* – *net incurrence of liabilities* – *loans* - *other financial corporations*, while according to BPM5 they are registered under the item *direct investment in the national economy* – *other capital*.

Other investment in Quarter II, 2014 recorded a net inflow of US\$ 89.62 million (US\$16.80 million on the *net decrease in financial assets* and US\$ 72.82 million on the *net increase of financial liabilities*).

October 2, 2014 Page 10 of 11

In Quarter I, 2014 the net outflow of other investment amounted to US\$ 110.73 million (outflow of 157.04 million on the *net acquisition of financial assets*, and inflow of 46.31 million on the *net incurrence of liabilities*). Compared to balance of payments *other investment* according to BPM5 (inflow of US\$ 0.18 million in Q I, 2014 and US\$ 34.76 million in QII, 2014) significant changes have occurred.

Under other investment liabilities, as a result of new methodological requirements, *loans* have changed, so that in Quarter I they recorded a net increase of US\$ 11.30 million (net growth of US\$ 4.77 million according to BPM5), and in Quarter II – a net decrease of US\$ 1.92 million (according to BPM5 – a net decrease of US\$ 8.08 million). *Other accounts receivable-payable*, according to BPM6, recorded a net decrease in liabilities: of US\$ 2.37 million and US\$ 1.00 million in Quarter I and II, respectively, while according to BPM5, *other liabilities* recorded a net increase of US\$ 115.07 million in Quarter I, 2014 and a net decrease of US\$ 49.7 million in Quarter II, 2014. Other components of *other investment* suffered no change, apart from being presented with additional details.

Other investment assets have the same values according to both BPM6 and BPM5, but are reflected with the reverse sign: "+" shows growth and "-" shows decrease.

According to BPM6, *exceptional financing* (table 3.7, Annex 3.8) reflects transactions carried out by authorities for balance of payments support, which involve ensuring that scheduled payments are made within debt service and other transactions aimed at balance of payments supporting, that affect official reserve assets in the current period (in the BPM5 version, arrears on the debt service by economic agents of other sectors and changes in historical debt for energy resources imports were also included).

Thus, exceptional financing recorded US\$ 4.31 million in Quarter I, 2014 (including the grant offered by the Romanian government worth US\$ 1.65 million and loans from the World Bank (IDA) to the Ministry of Finance amounting to US\$ 2.66 million). In Quarter II, 2014 exceptional financing amounted to US\$ 78.07 million (intergovernmental grants – US\$ 47.84 million, governmental loans for budget support – US\$ 30.23 million).

The balance of payments in analytical presentation according to BPM6 is presented in Annex 3, table 3.8.

Records concerning the compilation of balance of payments in Quarter I and II, 2014 according to new methodological standards are presented in annexes:

- **Annex 1** balance of payments of the Republic of Moldova (*standard presentation*) according to BPM6 requirements;
- Annex 2 analytical presentation of the balance of payments of the Republic of Moldova according to BPM6 requirements;
- Annexes 3.1 3.14 comparative presentation of two versions of the balance of payments (according to BPM5 and to BPM6), at the level of items in each subaccount.
