Forecast description:

Yearly description:

Годовой уровень инфляции Годовой уровень инфляции представляет рост потребительских цен за месяц текущего года по отношению к тому же месяцу прошлого года. Рассчитывается как выраженное в процентах соотношение между индексом цен месяца текущего года и индексом того же месяца предыдущего года, рассчитанных по отношению к той же базе, минус 100. Статистические работы по индексу потребительских цен выполняются Национальным бюро статистики. [57]. НБМ устанавливает цель инфляции на основании потребительских цен в размере 5.0% годовых (уровень инфляции за последние 12 месяцев – соответствующий месяц текущего года по отношению к тому же месяцу предыдущего года), с возможным отклонением  $\pm 1.5$  процентных пункта. (Источник: Стратегия денежной политики Национального банка Молдовы на среднесрочный период [58]. в апрель 2026 г. составил 6,77 процента.
